

火警調查犬隊 Fire Investigation Dog Team

消防員 15592 姜偉文和火警調查犬“石仔”

消防員 16670 蘇漢樂和火警調查犬“迪仔”

消防員 13476 吳鈞雄和火警調查犬“小高”

火警調查犬主要負責協助火警調查人員確定火場是否有助燃劑。牠們的嗅覺靈敏，能夠準確地偵測到火場是否有助燃劑，因牠們動作敏捷，可以快速及有效地搜索大面積的火場範圍，有助縮短調查人員挖掘及收集餘燼所需要的時間。現時本處共有三隊火警調查犬隊，每隊由一名領犬員和一頭火警調查犬組成。該三頭火警調查犬(名為石仔、迪仔和小高)均為拉布拉多尋回犬，牠們已完成訓練並能偵測出六種縱火時常用的助燃劑，包括電油、柴油、火水、松節水、天拿水和白電油。

Fire Investigation Dogs (FIDs) are mainly responsible for assisting fire investigators in identifying the presence of accelerant at the fire scene. They have a superior sense of smell and can accurately detect the presence of accelerant at fire scenes. They are very agile and able to search a large area quickly and efficiently, thus shortening the time required for excavation and debris sampling by the investigators. At present, there are three FID teams in this Department, each consisting of one handler and one fire investigation dog. The three FIDs (namely Rocky, Goose and Stig) are Labrador Retrievers. They have completed the training and are able to detect six kinds of accelerants commonly used to commit arson, namely petrol, diesel, kerosene, turpentine, thinner and white spirit.
